

Rosh: An Ancient Land Known to Ezekiel

—
James D. Price

Extensive evidence from ancient Near Eastern texts and from normal Hebrew syntax supports the view that ראש is a toponym in Ezek 38:2, 3 ; 39:1. The syntactical support involves a detailed examination of instances where some scholars posit a break in a construct chain. These hypothetical breaks are not convincing for several reasons. Therefore, ראש in Ezek 38:2, 3; 39:1 should be translated as a proper noun (“the prince of Rosh, Meshech, and Tubal” [NKJV]), not an adjective (“the chief prince of Meshech and Tubal” [KJV]).

* * *

Introduction

Among Bible expositors, controversy continues over the translation of the phrase נְשִׂיא מְשֶׁחַ וְתֻבַל ראש in Ezek 38:2, 3 and 39:1 —should the translation be “the chief prince of Meshech and Tubal” (AV), or “the prince of Rosh, Meshech, and Tubal” (NASB)? The controversy centers around the Hebrew word ראש; is the word a place name (Rosh) or an adjective (chief)?

There are two principle arguments denying that ראש is a place name: a philological argument and a grammatical argument. The philological argument states that the primary meaning of ראש is “head” as a noun, and “chief” as an adjective,¹ and that the word is unknown as a place name in the Bible, Josephus, and other ancient literature. J. Simons, a noted authority on ancient geography, wrote:

That in one or more of these texts a people of that name whose home was in Asia Minor, is indeed mentioned, is not entirely disproved but it is at any rate rendered improbable by the fact that the same name can be discerned only very doubtfully in other (Assyrian) documents.²

1. BDB, 910–11.

2. J. Simons, *The Geographical and Topographical Texts of the Old Testament* (Leiden: E. J. Brill, 1959) 81.

The grammatical argument states that the absence of a conjunction between רֹאֵשׁ and מְשֻׁכָּה precludes רֹאֵשׁ from being a noun. William Gesenius stated the applicable grammatical principle: “Contrary to English, which in lengthy enumerations uses *and* to connect only the last member of the series, in Hebrew *polysyndeton* is customary.”³ This means that Hebrew uses a conjunction between every word in a series. On the basis of this grammatical rule Simons concluded, “The reading מְשֻׁכָּה (not וּמְשֻׁכָּה) in both texts argues against a tripartite enumeration of peoples or countries.”⁴

These arguments have been convincing to many scholars and have resulted in the retention of the AV reading in a number of modern versions (*RSV, NIV, NAB*). Ralph H. Alexander represented the typical response when he wrote, “The author does not consider the word *ros* [*sic* !] to be a proper name in light of the syntax of the Masoretic text and the usage of the term throughout the Old Testament and extra-biblical literature.”⁵

But on the other hand, many authorities accept רֹאֵשׁ as a toponym, and regard the grammatical problem to be of no consequence. Among these are C. F. Keil,⁶ C. L. Feinberg,⁷ D. J. Wiseman,⁸ T. G. Pinches,⁹ and standard lexicons.¹⁰ Also, several modern versions translate the phrase “prince of Rosh, Meshech, and Tubal” (*ASV, NASB, NEB, NKJV, Harkavy*); and some even recognize the land of Rosh in a reconstruction of the difficult Masoretic text of Isa 66:19, “Meshech, Rosh, Tubal, and Javan” (*NASB, JB, NEB*). Thus, the arguments against this translation may not be as convincing as some think.

Those who support the view that רֹאֵשׁ is a toponym observe that this use of *rôš* is not entirely unknown in the ancient literature. Pinches pointed out that the LXX translators must have known the place, because they transliterated the word as a place name. He also

noted references to the land of Râshi (= Rosh) in the Annals of Sargon.¹¹ Opponents of the view discount these references as insignificant.

Also, those who support the place-name view point to a much more serious grammatical problem involved with regarding ראש as an adjective—the adjective intervenes between the construct noun נַשִּׁי (prince of) and its genitive *nomen rectum* מְשֶׁח וְתוּבַל (Meshech and Tubal). This is a syntactic anomaly. Opponents of the view dismiss the problem by observing that broken construct chains do occur in Biblical Hebrew. Simons discounted the problem by stating, “The translation of Eze. xxxviii 2.3 and xxxix 1 by ‘Gog, chief prince of Meshech and Tubal’ is grammatically difficult but cannot be said to be impossible.”¹² But it is very doubtful that this problem can be brushed off so lightly and that the ancient references to the land of Rosh can be ignored.

This article demonstrates that Rosh was a well-known place in antiquity as evidenced by numerous and varied references in the ancient literature. The article also demonstrates that in Ezek 38:2, 3; 39:1 the absence of the conjunction with מְשֶׁח is inconsequential and it is syntactically improbable that ראש is an adjective. A logical explanation is offered for the origin of the interpretation of ראש as an adjective. The conclusion is drawn that the best translation of Ezek 38:2, 3; 39:1 is “prince of Rosh, Meshech, and Tubal.”

Philological Arguments

Rosh was a Well-Known Place

Rosh has not been recognized among the place names of antiquity because scholars have failed to take into account the well-known phonetic shifts that occur within the Semitic languages. When differences in pronunciation are taken into account, I found the name Rosh (or its phonetic equivalents) twenty times in five different ancient sources without an exhaustive search.

Variant Pronunciations of Rosh

The word that means “head” as a noun and “chief” as an adjective is common to most of the Semitic languages, but its pronunciation varies. Due to the phonetic phenomenon known as the Canaanite shift¹³ the word is pronounced rôš in Hebrew and the Canaanite

11. Pinches, “Rosh,” 4:2623.

12. Simons, *Geographical and Topographical Texts*, 81.

13. William S. LaSor, *Handbook of Biblical Hebrew* (Grand Rapids: Eerdmans, 1979) 2:38. The Semitic /â/ shifted to /ô/ in the Canaanite dialects.

dialects,¹⁴ but in the other Semitic languages it is pronounced as rāšu (Arabic),¹⁵ rēš (Aramaic),¹⁶ riš / rēšu (Ugaritic),¹⁷ rēšu / rāšu (Akkadian).¹⁸ The final vowel (u) is the nominative case ending; alternative final vowels supply the genitive (rāši / rēši) and the accusative (rāša / rēša). Wherever the Semitic word for “head/chief” was used as a place name, it is expected that it would follow the pronunciation and orthography of the language in which it was used. That was true for most place names that were derived from the meaningful Semitic vocabulary.

Rosh was a Name

The word ראש (rōš or its phonetic equivalent rāš / rēš) was not used exclusively as a common noun or adjective in the Semitic languages. The word also was used as the name of persons and places, and in compound names of persons and places. The use of rōš as the name of a specific land is demonstrated in the next section. Rosh was the name of a son of Benjamin (Gen 46:21), and Rēsh was the name of an Akkadian temple.¹⁹ Also, the word is found in compound place names such as Rēsh-eni,²⁰ and in modern Arabic place names such as Ras Shamra, Ras Naqura, Ras el-Ain, etc. Additionally, the word is found in many compound personal names of antiquity, such as Rāshi-ili,²¹ Rēsh-Adad king of Apishal,²² Rēsh-beli father of Tubalīt-Bini,²³ Rēsh-Dumuzi,²⁴ Rēsh-Ea,²⁵ Rēsh -ili son

Rosh Mentioned Twenty Times as a Place Name

The place name Rosh (or its phonetic equivalents in the respective languages) was found three times in the LXX, ten times in Sargon's inscriptions, once on Assurbanipal's cylinder, once in Sennacherib's annals, and five times on Ugaritic tablets—a total of twenty references in five different sources. The following sections list the references.

Rosh in the LXX. The LXX translates Ezek 38:2, 3; 39:1 as ἄρχοντα Ρως, Μοσοχ και θοβελ. The Greek obviously transliterated the Hebrew pronunciation.

Rosh in Sargon's Inscriptions. Various inscriptions of Sargon mention the land of Râshu. The inscriptions noted in this study are as follows.

(1) The Annals of Sargon (year 12, 11. 228–316):

Til-Hamba, Dunni-Shamshu, Bubê, Hamanu, strong cities in the land of Râshi, became frightened at the onset of my mighty battle(array) and entered Bît-Imbî.³⁴

(2) Sargon's Display Inscription.

In the might and power of the great gods, my lords, I cut down all my foes...the lands of Ellipî and Râshi which are on the Elamite border on the banks of the Tigris.³⁵

(3) Sargon's Display Inscription of Salon XIV

In the might of Assur, Nabû and Mardu, the great gods, my lords, who sent forth my weapons, I cut down all my enemies...the lands of Râshi

and Ellipi which are on the Elamite frontier, the Arameans who dwell on the banks of the Tigris....³⁶

Râshu is also mentioned as a place name in the following additional inscriptions of Sargon: (a) Sargon's Bull Inscription,³⁷ (b) Sargon's Pavement Inscription (mentioned 5 times),³⁸ and (c) Sargon's Cylinder Inscription.³⁹

Rosh in Assurbanipal's Texts. The land of Râshu is mentioned in Assurbanipal's Texts on the Rassam cylinder, the eighth campaign against Elam (col. IV, 11. 63ff):

In my eighth campaign, at the command of Assur and Ishtar, I mustered my troops, (and) made straight for Ummanaldasi, king of Elam, Bît-Imbî, which I had captured in my former campaign,—this time I captured (together with) the land of Râshi, (and) the city of Manamu with its (surrounding) district.⁴⁰

Rôsh in Sennacherib's Annals. The land of Rêshu is mentioned in the annals of Sennacherib:

First year of Nergalushezib: ...One year and 6 months was Nergalushezib king in Babylon. In the month of Tashritu, the 26th day, his people made a rebellion against Hallashu, king of Elan, ...and killed him... Afterward Sennacherib marched down to Elam and destroyed...(the country) from the land of Rishi as far as Bit-Burnaki.⁴¹

(*Rishi* is the equivalent of *Rêshu*.)

Rôsh in Ugaritic Literature. The Ugaritic literature mentions people of the land of Rêshu in the following texts:

These references to Rosh (Râshu/Rêshu) demonstrate that it was a well-known land in antiquity on the banks of the Tigris River, bordering on Elam and Ellipi.

George C. Cameron, the noted historian of early Iran, identified the land as “the Râshi tribe of Arameans, well known to the Assyrians from Sargon onward and located in the mountains east of Der, where was its capital, Bit Imbi.”⁴⁸ Other of its prominent cities were Hamanu, Bube, Bit Bunakki, and Bit Arrabi.⁴⁹ The cumulative effect of the preceding is that Rosh was a well known place. The next section demonstrates that the word רֶאֶשׁ is most probably not an adjective in Ezek 38:2, 3 and 39:1

Syntactical Arguments

Contrary to the objection of Simons, the absence of a conjunction between ראש and משך does not make it impossible for ראש to be a place name. On the other hand, the fact that the word נשיא (prince) is a construct noun does make it extremely doubtful that ראש is an adjective (chief).

Missing Conjunction is Inconsequential

Although it is customary for Hebrew to use conjunctions between all the words in a series, it is not mandatory. Many exceptions to the rule are found. After giving the previously noted rule of polysyndeton in Hebrew, Gesenius cited the exception, “Sometimes, however, only the last two words are joined.”⁵⁰ Examples are found in Gen 5:32 (נח אֶת־שֵׁם וְאֶת־חָם וְאֶת־יָפֶתַח / ‘And Noah begot Shem, Ham, and Japheth’), Gen 11:26 (וַיֵּלֶד אֶת־אַבְרָם וְאֶת־נְחוֹר וְאֶת־חָרָן / ‘And he begot Abram, Nahor, and Haran’), and Gen 13:2 (בַּמֶּנְהָה בַּכֶּסֶף וּבַזָּהָב / ‘in livestock, in silver, and in gold’). This exception corresponds exactly to the syntax of Ezek 38:2, 3; 39:1; consequently ראש can be a noun in a series without violating normal conventions of Hebrew grammar.

Hebrew Syntax Expects ראש to Be a Name

If ראש is regarded as a name, then the syntax of the passage is in keeping with the normal conventions of Hebrew grammar. In this case, the construct noun נשיא (‘prince of’) is followed by a compound *nomen rectum* consisting of a series of three names (Rosh, Meshech, and Tubal). Although Hebrew avoids lengthy series of coordinate genitives depending on one *nomen regens*, numerous examples are found in the Bible of short series of closely related words.⁵¹ Examples are found in Gen 14:19 (“Possessor of heaven and earth”), Gen 28:5 (“the mother of Jacob and Esau”), Exod 3:16 (“the God of Abraham, of Isaac, and of Jacob”),⁵² Num 20:5 (“a place of grain or figs or vines or pomegranates”), 1 Sam 23:7 (“a town of gates and bars”), Ps 8:2 (“the mouth of babes and infants”), and Isa 22:5 (“a day of trouble and treading down and perplexity”).

These examples demonstrate that regarding ראש as a name conforms with known conventions of biblical Hebrew. However, the next section demonstrates that regarding ראש as an adjective does not so conform.

50. GKC, 154a; note other examples at Gen 10:1, 14:1, 30:39 ; Jer 2:36 ; Ps 45:9.

51. GKC, 128a.

52. Note the absence of the conjunction between “Abraham” and “Isaac.”

Syntax Rejects ראש as an Adjective

If ראש is regarded as an adjective, a syntactical anomaly results. One of the fundamental principles of Hebrew grammar is not observed—a word normally does not intervene between a construct noun and its *nomen rectum*. Joshua Blau stated the basic principle of this convention of nonintervention, “Nothing must intervene between the construct and the *nomen rectum*. Accordingly, even an adjective attribute of the construct has to come after the *nomen rectum*.”⁵³

As this convention applies to the words ראש מֶשֶׁךְ וְתוּבַל of Ezek 38:2, 3; 39:1, it indicates that it is quite unlikely for the adjective attribute ראש (chief) of the construct noun נָשִׂיא (prince) to intervene between the construct and the *nomen rectum* מֶשֶׁךְ וְתוּבַל (Meshech and Tubal). Therefore, unless the principle of nonintervention permits exceptions of this type, it is extremely improbable that ראש is an adjective. Rather, it is extremely probable that it is a name in accord with normal syntax. The following sections demonstrate that there are no undisputed exceptions to the principle of nonintervention.

Hebrew Syntax Uses Other Constructions for Adjectives

When Hebrew expresses an adjective attribute for a construct noun, it regularly uses other syntactic constructions. There are four possible syntactic structures which could be used to express the thought “chief prince of Meshech and Tubal.”

(1) The absolute adjective may follow the *nomen rectum*, as Blau’s statement suggested. This construction is used most often. Examples are found in 2 Sam 13:18 (בְּנֹת־הַמֶּלֶךְ הַבְּתוּלָה / ‘the king’s virgin daughters’) and Isa 55:3 (הַסְדֵי דָוִד הַנְּאֻמָּנִים / ‘the sure mercies of David’). When the statement becomes ambiguous or too complex, alternate constructions are used. The use of this construction in Ezek 38:2 would produce the ambiguous phrase ראש מֶשֶׁךְ וְתוּבַל הָרֵאשׁ where הָרֵאשׁ may modify תוּבַל or נָשִׂיא. Therefore, the construction would be inappropriate here.

(2) The construct adjective may be placed before the noun phrase it modifies. In this case the Hebrew would read ראש נָשִׂיא מֶשֶׁךְ וְתוּבַל. Some examples of this are בְּתוּלַת בֵּית צִיּוֹן / ‘virgin daughter of Zion’ (Isa 37:22), ראשי הַנְּשִׂאִים / ‘chief princes’ (1 Chron 7:40), ראשי הַבְּשָׂמִים / ‘chief spices’ (Cant 4:14), and ראשי הָאֲבוֹת / ‘chief fathers’ (1 Chron 9:34).

53. Joshua Blau, *A Grammar of Biblical Hebrew* (Wiesbaden: Harrassowitz, 1976) 96; see also August Müller, *Hebrew Syntax* (Glasgow: James Maclehouse & Sons, 1882) 54.

(3) The absolute adjective may precede the noun phrase it modifies. In this case the Hebrew would read ראש נשׂיֵא מְשַׁךְ וְתֹבֵל (ה). Examples of this combination are found in Ezek 21:25 (אַתָּה הַלֵּל רָשָׁע נְשִׂיא יִשְׂרָאֵל / ‘You, O profane wicked prince of Israel’), Isa 23:12 (הַמְעַשְׂקָה בְּתוּלַת בֵּת צִידוֹן / ‘You oppressed virgin daughter of Zidon’), and Isa 52:2 (שְׁבִיָּה בֵּת צִיּוֹן / ‘captive daughter of Zion’).

(4) When a complex *nomen regens* prevents the attachment of a genitive *nomen rectum* by means of a construct form, the genitive may be attached by means of the preposition ל. ⁵⁴ This occurs when the *nomen regens* is a proper name, or has unmoveable modifiers. Judg 3:28 (מְעַבְרֹת הַיַּרְדֵּן לְמֹאָב / ‘the Jordan fords of Moab’) and Hag 1:1 (בְּשָׁנָה שְׁתַּיִם לְדַרְיָוֹשׁ / ‘in the second year of Darius’) have examples of this construction. Although no example was found using an attributive adjective, it seems probable that the construction הַנְּשִׂיא הָרֹאשׁ לְמֶשֶׁךְ וְתֹבֵל would accurately express “chief prince of Meshech an Tubal.”

These examples demonstrate that Hebrew has regular syntactic conventions for accommodating an adjective attribute of a construct noun without violating the principle of nonintervention. Ezekiel used these conventions in statements similar to 38:2, 3; 39:1 (see, e.g., Ezek 21:25). It is highly unlikely that Ezekiel would violate such a widely used principle of Hebrew grammar. The next section demonstrates that alleged broken construct chains do not correspond to the syntax at Ezek 38:2, 3; 39:1 and do not justify regarding ראש as an adjective.

Adjective Modifying a Construct Does Not Apply

Some argue that, although it is unusual, there are certain cases where attributive adjectives follow construct nouns, such as כֹּהֵן הָרֹאשׁ — “chief priest” (2 Kgs 25:18, Jer 52:24, etc.). However, the Ezekiel problem involves the possibility of an adjective intervening between a construct noun and its *nomen rectum*, not merely following the construct. Consequently such cases have no bearing on the Ezekiel problem.

Broken Construct Chains Do Not Apply

Based on the evidences given by Gesenius, ⁵⁵ and supplemented by M. Dahood ⁵⁶ and D. N. Freedman, ⁵⁷ some have concluded that

54. GKC, 129.

55. GKC, 130a-f.

56. M. Dahood, *Psalms* (AB; Garden City: Doubleday, 1970) 3:81–83.

57. David Noel Freedman, “The Broken Construct Chain,” *Bib* 53 (1972) 534-36.

Hebrew grammar admits exceptions to the principle of nonintervention called broken construct chains. Evidence was given by these scholars citing several examples from the Hebrew Bible where a construct noun is not followed immediately by a genitive *nomen rectum*. These alleged broken construct chains are considered by some as justification for regarding שָׂרָא as an adjective that legitimately breaks the construct chain in Ezek 38:2.

Constructs are Created by Rhythm. The existence of alleged broken construct chains in biblical Hebrew should not be accepted hastily as justification for a broken chain in Ezek 38:2, 3, and 39:1. Most syntactic constructions classified by Dahood and Freedman as broken construct chains were previously noted by Gesenius, but were not regarded by him as broken chains. The problem is that not every construct form is a *nomen regens* that anticipates a genitive *nomen rectum*. A construct form comes about when the language places two words in such close rhythmical relationship that they receive only one major accent. The first word of the pair loses its accent and its form becomes a construct; the second word receives the major accent and retains its standard (absolute) form. Gesenius said,

It is sufficiently evident...that the *construct state* is not strictly to be regarded as a *syntactical* and *logical* phenomenon, but rather as simply *phonetic* and *rhythmical*, depending on the circumstances of the tone.⁵⁸

The genitive relationship between nouns regularly produces this condition; the *nomen regens* has the construct form and the *nomen rectum* has the absolute form. This construction is commonly known as a construct chain. Because it is so common in Hebrew, it may mistakenly be regarded as the only use of the construct form. Actually, since the construct state is phonetic and rhythmical, not strictly syntactical, Hebrew frequently exhibits other cases of the construct state not associated with the genitive relationship between nouns. Gesenius noted several such constructions: "The construct state...is frequently employed in rapid narrative as a connective form, even apart from the genitive relation."⁵⁹ The following constructions were listed by Gesenius. (1) The construct state frequently governs prepositional phrases, particularly in prophecy and poetry, especially when the construct word is a participle. (2) The construct state frequently governs a relative pronoun clause. (3) The construct state sometimes governs an independent clause. This construction may be understood as a case

58. GKC, 89a.

59. GKC, 130a-c.

where the relative pronoun is elided. (4) The construct state is sometimes followed by *waw* conjunctive where the connection is strong. Müller⁶⁰ noted a few cases where a construct participle precedes an accusative. An example is מְשִׁיחֵי אֹתִי / ‘those who serve me’ (Jer 33:22). None of the above should be mistaken for a construct chain: no genitive relationships were indicated. They represent the purely phonetic and rhythmical cases.

The same phonetic and rhythmical conditions occasionally produce construct-like forms in other parts of speech, such as particles, adverbs, prepositions, pronouns and verbs. When such words are closely related to the following words by *maqeph*, the accent is drawn away from the word, resulting in a construct-like reduction of the vowel. Examples of particles are יֵשׁ versus יֵשׁ־אֵת, אֵת versus אֵת־אֵת, and הֵן versus הֵן־וְ. An example of an adverb is כֵּן versus כֵּן־הוּא which is found in Gen 44:10; Josh 2:21; and 1 Sam 25:25. Examples of prepositions are אֵת versus אֵת־ (with) and בְּעַד (Cant 4:1) versus בְּעַד־הַחֵלְדָן (Josh 2:15). An example of a pronoun is מָה versus מָה־ (what?). Several examples of verbs are found: הִפְרָד־נָא versus הִפְרָד (‘please separate yourself’; Gen 13:9), הִבֵּט versus הִבֵּט־נָא (‘please look’; Gen 15:5), שָׁב versus שָׁב־שָׁם (‘dwell there’; Gen 35:1), לֵךְ versus לֵךְ־נָא (‘please go’; Gen 37:14), וְכָתַב versus וְכָתַב־שָׁם (‘he wrote there’; Josh 8:32), מִשַׁל versus מִשַׁל־בָּנוּ (‘rule over us’; Judg 8:22), יִמְשַׁל versus יִמְשַׁל־בָּם (‘he will rule over them’; Isa 19:4, Joel 2:17), יַעֲבֹר־זַעַם versus יַעֲבֹר (‘the indignation is past’; Isa 26:20), הִתְקַדְּשׁ versus הִתְקַדְּשׁ־שִׁהָג (‘a festival is kept’; Isa 30:29), יִמְלֹךְ versus יִמְלֹךְ־מֶלֶךְ (‘a king will reign’; Isa 32:1), יִרְמֹס versus יִרְמֹס־טִיט (‘he treads clay’; Isa 41:25), אֶתְמַדְּבָר versus אֶתְמַדְּבָר־בֵּר (‘I uphold him’; Isa 42:1), אֶצְק־מִים versus אֶצְק־אֶצְק־ (‘I will pour water’; Isa 44:3), דַּבֵּר versus דַּבֵּר־עוֹשֶׂק (‘to speak oppression’; Isa 59:13), and יִשְׁמַר־לָנוּ versus יִשְׁמַר (‘he keeps for us’; Jer 5:24).

All these examples demonstrate the role that rhythm plays in creating construct and construct-like forms. But none of these are equivalent to true construct chains governed by the principle of nonintervention.

True Construct Chains Involve a Genitive

The true construct chain, particularly as it relates to the problem in Ezekiel 38, is limited to the genitive relationship between nouns. It is in this particular case that the principle of nonintervention applies, and it is this particular case that must be tested for exceptions, not whether a construct form may be succeeded by something other than an absolute *nomen rectum*.

60. Müller, *Hebrew Syntax*, 53.

There are several commonly known modifications of the principle of nonintervention that must not be regarded as violations.

(1) A construct may follow another construct when there is a series of genitives.⁶¹ This forms a construct chain of more than two links, the last of which is an absolute. The principle of nonintervention then applies to the entire series.

(2) The definite article may precede the absolute *nomen rectum*. Since it is a prepositive, it is regarded as part of the *nomen rectum*.

(3) The locative *He* may follow the first construct as a post-positive case marker.⁶² It is regarded as part of the *nomen regens*.

(4) Although it is not common, the construct may receive a pronoun suffix.⁶³ Usually the pronoun is attached to the *nomen rectum* even though it modifies the construct,⁶⁴ but where sense or style requires, the construct may receive the suffix. Since it is a suffix, it must be regarded as part of the *nomen regens* not as an intervening word.

(5) Although it is not common, a negative may precede the *nomen rectum*. The negative is usually connected to the *nomen rectum* by a *maqeph*, making it the equivalent of another construct, or a part of the *nomen rectum*. The negative must precede the word it negates and, like another construct, it is a legitimate modification to the principle of nonintervention. Examples of this construction are found in Isa 31:8 (הָרֶבֶב לְרֵאשֵׁי אִישׁ / 'a sword not of man'), Isa 31:8 (הָרֶבֶב לְרֵאשֵׁי אָדָם) / 'a sword not of mankind'), 2 Sam 23:4 (בֹּקֶר לֹא-עִבְרֹת) / 'a morning of no clouds'), and Isa 14:6 (מַכַּת בְּלִתֵּי סָרָה) / 'a stroke of non-withdrawal').

None of these modifications of the principle of nonintervention corresponds to the grammar of Ezek 38:2, 3; 39:1. None accounts for an attributive adjective intervening between a construct noun and its genitive *nomen rectum*.

True Construct Chains are Seldom if Ever Broken

Now the question to be answered is this: have any clear examples been found of a departure from the principle of nonintervention? If so, are the exceptions sufficient to justify considering מְשִׁיב רֵשׁ מִן-הַבָּלַיִם to be a broken construct chain? The Ezekiel case would consist of an adjective attribute of the *nomen regens* interposed between the *nomen regens* and the *nomen rectum*.

61. GKC, 128a.

62. GKC, 90c.

63. GKC, 128d.

64. Müller, *Hebrew Syntax*, 54.

In general the syntax of biblical Hebrew is structurally consistent; there are relatively few structural discontinuities. Where the syntax exhibits discontinuity, it is for emphasis, clarification, the avoidance of ambiguity, or due to an author's style. Occasionally a discontinuity is created by ellipsis. But legitimate discontinuities are purposeful and meaningful, not accidental and enigmatic.

If there is proof that the principle of nonintervention may not always be followed (as some believe to be true in Ezek 38:2), the proof must consist of clear, unambiguous examples from biblical Hebrew. The examples cannot be created by speculative emendation; they must have interventions similar to Ezek 38:2; and they cannot be examples of the admissible modifications of the principle previously mentioned. It should be expected that an example would exhibit a case where the discontinuity provides clarification, emphasis, the avoidance of ambiguity, or evidence of stylistic purpose. It is not expected that the discontinuity should be explained as a grammatical blunder that contributes to confusion.

Numerous examples of possible broken construct chains have been listed by Gesenius, Dahood, and Freedman. Yet none of them qualify as an unambiguous precedent that proves that true construct chains may be broken.

Gesenius' Broken Construct Chains

Because Gesenius felt so strongly about the principle of nonintervention, he was very reluctant to recognize any possible exception. He said:

As the fundamental rules are the necessary consequence not merely of *logical* but more especially of *rhythmical* relations,... we must feel the more hesitation in admitting examples in which genitives are supposed to be loosely attached to forms other than the construct state.⁶⁵

Others have been more willing to accept broken construct chains, but Gesenius' reluctance should serve as a warning against hastily discovering supposed discontinuities in Hebrew syntax. Although he did not regard these passages in Ezekiel as broken construct chains, he did discuss certain problems related to the principle of nonintervention.⁶⁶

Intervening Pronoun Suffix. Gesenius listed several examples of a pronoun suffix intervening between a construct and its

65. GKC, 128b.

66. GKC, 130a-f.

nomen rectum. He tried to explain away the noted cases as textual corruptions or by emendations. Actually, according to previous discussion, such pronoun suffixes are to be regarded as part of the *nomen regens* and not a violation of the principle of nonintervention. The use of a pronoun suffix with the *nomen regens* is uncommon, but required at times to avoid ambiguity.

Special Case for the Construct of לל. Gesenius⁶⁷ recorded a special problem with the word לל (also noted in BDB). Three times its construct seems to have a word interposed between it and its genitive, a structure which BDB marks as very anomalous:

2 Sam 1:9	כי כל-ערד נפשי בי
Job 27:3	כי כל-ערד נשמתי בי
Hos 14:3	כל-תשא ערן

Gesenius suggests that לל must be regarded as adverbial in these cases in the sense of “wholly.” That is a good suggestion; however, the possibility remains that they may be broken construct chains. In any case, לל is a quantifier, not a noun, and as such it has unique rules of syntax that vary somewhat from those of nouns. It is doubtful that this special case can be used to justify an intervening adjective in Ezekiel.

Intervening Adjectives. Gesenius listed several other examples of possible broken construct chains.⁶⁸ He listed Isa 28:1 as a possible case of an intervening adjective. The text reads גיא נשמן הרומי יין / ‘the rich valley of those overcome with wine’ (RSV). It is understood by some that נשמן is an adjective attribute of the *nomen regens* גיא intervening between it and הרומי. This seems to be the way it was understood by *KJV*, *ASV*, *RSV*, and *NASB*. However, נשמן is not an adjective but a noun;⁶⁹ and it is not in grammatical concord with גיא as expected for an adjective. The form may be the abstract plural with the meaning “fatness,” “richness,” in which case “the valley of richness” is a proper way of expressing “rich valley.” Thus, it is proper to understand “the valley of the richness of those overcome with wine” as the equivalent of “the rich valley of those....” However, to express this equivalent construction would require נשמן to be in the construct state (and thus not violate the principle of nonintervention).

67. GKC, 128e.

68. GKC, 128c.

69. BDB, 1032.

Because *שְׂמִינִים* is not construct, and because of the disjunctive accent separating the two halves of the expression, many translators regard the halves as not syntactically related (*NIV, NAB, TEV, NKJV*). This seems to be the better choice since it follows conventional grammar. Although it is possible to regard the example as a broken chain, the grammar and accents are against it. Thus, it cannot be used as an unambiguous precedent.

Gesenius also listed Isa 32:13 as a possible case of an intervening adjective. The text reads *כָּל בְּתֵי מְשֻׁרָשׁ קְרִיָּה עֲלִיָּזָה* / ‘all the joyous houses of the jubilant city.’ It is possible to regard *מְשֻׁרָשׁ* as an adjective attribute of *בְּתֵי* interposed between it and its *nomen rectum* *קְרִיָּה*. But, as in the previous example, *מְשֻׁרָשׁ* is a noun meaning “exaltation,”⁷⁰ and a disjunctive accent separates the halves of the expression. Nearly all translators understand the halves to be syntactically unrelated, and to have an elided words between them (*KJV, RSV, ASV, NASB, NIV, TEV, NKJV*), or to be appositives (*NAB*). It seems to be wholly rejected as a broken construct chain.

Gesenius also listed Isa 28:16 as a possible case of an intervening adjective. The text reads *מִוֶּסֶד מוֹקֵד יִקְרָת פִּנֵּת* / ‘a costly cornerstone of a foundation.’ It is possible to regard *יִקְרָת* as an adjective attribute of *פִּנֵּת* interposed between it and its *nomen rectum* *מוֹסֵד*. Although Gesenius asserted that *יִקְרָת* is a construct noun not an adjective,⁷¹ it is classified as an adjective in his lexicon, in *BDB* and others. Yet it is unusual for an attributive adjective to be in the construct state. The text is problematical and cannot serve as an unambiguous precedent.

Gesenius also listed Ezek 6:11 as a possible case of an intervening adjective. The text reads *כָּל תִּלְעֻבֹת רְעֵלַת בַּיִת יִשְׂרָאֵל* / ‘all the evil abominations of the house of Israel.’ It is possible to regard *רְעֵלַת* as an adjective attribute of *תִּלְעֻבֹת* interposed between it and its *nomen rectum* *בַּיִת יִשְׂרָאֵל*. Although Gesenius asserted that *רְעֵלַת* must be a construct noun (evils) not an adjective, the form could be either an adjective or a construct noun. However, since the construct noun follows normal grammar and makes good sense, Gesenius should be given the benefit of the doubt. Since the key word *רְעֵלַת* is ambiguous, this example cannot serve as an unambiguous precedent.

In summary, Gesenius’ examples are problematical and ambiguous. None can serve as proof that true construct chains may be broken in biblical Hebrew.

70. *BDB*, 965.

71. *GKC*, 130f, n. 4.

Dahood's Broken Construct Chains

Dahood listed several possible examples of broken construct chains in addition to those listed by Gesenius.⁷²

Intervening prepositions. Dahood listed several examples of a construct chain broken by a preposition. He has mistakenly identified a construct governing a prepositional phrase as a construct chain. In each case the relationship of the construct with the absolute is defined by the preposition, not by the genitive. The meaning would be incomplete without the preposition. The reason for the construct form is *phonetic* and *rhythmical*, not *syntactical* and *logical*.

In addition, 3 of the 5 examples are ambiguous—the forms are not clearly constructs; they may properly be absolutes (Ps 9:10; 10:1; 92:13). In the remaining two examples, Dahood revocalized the Masoretic text to create the example (Ps 74:12; 84:7). The Masoretic text of Ps 84:7 does have a construct before a preposition, but it comes under the above comment.

Intervening pronoun suffix. Dahood listed 17 examples of a construct chain broken by a pronoun suffix. In six of the 17 examples, Dahood revocalized the Masoretic text to create the case (Ps 16:8; 18:18; 35:16; 88:16; 102:24–25; 140:10). In Ps 102:24–25 he made the chain bridge the end of a verse, and in Ps 140:10 he made it bridge an *athnach*—obvious departures from the Masoretic punctuation.

In three other cases his examples are construct participles governing an accusative pronoun suffix and an adverb: Ps 35:19 (“those who are my enemies wrongfully”), Ps 35:19 (“those who hate me without cause”), and Ps 38:20 (“those who hate me wrongfully”). These are not examples of a construct governing a genitive *nomen rectum*. The construct forms originated from rhythm and phoentics, not necessarily because of grammar.

In six other cases the construct has a genitive pronoun suffix, and the second word of the phrase is properly identified as an adverb not an absolute noun. Construct nouns do not govern adverbs. The noun takes the construct form because of the pronoun suffix. The examples are not broken construct chains:

- Ps 38:20 “My enemies are lively”
- Ps 48:15 “This God is our God forever and ever”
- Ps 61:5 “I will abide in your tabernacle forever”
- Ps 66:7 “He rules by his power forever”
- Ps 71:6 “My praise shall be continually of you”
- Ps 105:4 “Seek his face forever”

72. Dahood, *Psalms*, 3:381–83.

In one other case his example is actually a proper name, “Melchizedek” (Ps 110:4).

In all the above cases *AV*, *NASB*, *NKJV*, and *NIV* do not agree with Dahood, but view them according to more conventional grammatical theory. The *NIV* regards the second word of Ps 38:20 as an attributive adjective.

In only one case is there a possible broken construct chain: אַתָּה מְחַסֵּי עוֹז / ‘You are my strong refuge’ (Ps 71:7). This example comes under the permissible variations of the principle of nonintervention, which is not properly a violation. The pronoun cannot be attached to the *nomen rectum* without changing the sense. The construct state of the *nomen regens* has been carefully preserved in the Masoretic text by the absence of a principle accent, and by the *maqeph*, even though there is a pronoun suffix.

Intervening emphatic ׀. Dahood listed six examples of construct chains allegedly broken by an emphatic ׀. None of the examples were recognized by the Masoretes as the emphatic ׀. In each case Dahood emended the Masoretic presentation of the text to create the example—always by adding a space between consonants and, in some cases, by changing the vowels. All of the alleged examples are properly identified as pronoun suffixes of direct address followed by a vocative, not a genitive. None are unambiguous examples of broken construct chains.

Intervening enclitic mem. Dahood listed 23 examples of construct chains with intervening enclitic *mem*. However all of these examples involved revocalizing the Masoretic text to create the examples. Such revocalization is not strong evidence to demonstrate that an enclitic *mem* actually breaks the construct chain in biblical Hebrew.

Intervening vocative. Dahood listed one example of a construct chain with an intervening vocative, Ps 145:7, which reads זָכַר רַב־טוֹבָךְ / ‘the record, O Master, of your goodness’. רַב is regarded as the intervening vocative. However, Dahood emended the Masoretic marking by omitting the *maqeph* between רַב and טוֹבָךְ, and by ignoring the lack of an accent on רַב, both of which identify רַב as a construct form. As a construct noun, רַב is a member of an unbroken construct chain that is grammatically and semantically correct. The phrase is literally translated “the memory of the greatness of Your goodness,” or “the memory of Your great goodness” (*NKJV*). Dahood’s revocalization does not convincingly demonstrate that vocatives actually break construct chains in Biblical Hebrew.

In summary, Dahood did not list one example of an unambiguous broken construct chain; all his examples involved revocalizations,

ambiguous forms, or construct forms originating because of phonetics and rhythm rather than from a grammatical genitive relationship. Not one involves an intervening adjective and not one qualifies as a precedent for regarding ראש as an adjective in Ezek 38:2, 3; 39:1. Furthermore, Dahood did not list these Ezekiel passages as examples of broken construct chains.

Freedman's Broken Construct Chains

David Noel Freedman attempted to add more examples of broken construct chains to those listed by Dahood and Gesenius.⁷³

Intervening enclitic mem. Freedman listed several additional examples of an intervening enclitic *mem*. All involved revocalizing the Masoretic text; none convincingly demonstrates that an enclitic *mem* actually breaks a construct chain in Biblical Hebrew.

Intervening clause. Freedman proposed that there is a clause breaking a construct chain in Isa 10:5 which reads וּמַכָּה־הוּא בְיָדָם וְעָמִי. In this rather difficult construction, he proposed that the clause הוּא בְיָדָם / 'he is in their hand' breaks the construct chain... מַכָּה וְעָמִי / 'the staff of...my fury'. In doing so he emended the absolute noun מַכָּה to its construct form מַכָּה and emended the word בְיָדָם to בְיָדַי ('in my hand') with an enclitic *mem*. His translation is "the staff of my fury is he in my hand." His emendations created the broken construct chain. The Hebrew is difficult, but it can be understood without emending the Masoretic text. The *KJV* has "and the staff in their hand is my indignation," the *NKJV* has "and the staff in whose hand is My indignation," and the *NASB* has "and the staff in whose hands is My indignation." All these make tolerable sense following the Masoretic vocalization. Freedman's speculative revocalization does not provide strong evidence to demonstrate that Isa 10:5 is an instance where a clause really breaks a construct chain.

Intervening pronoun suffix. Freedman listed Hab 3:8 as an example of an intervening pronoun suffix: מְרַבְּתֶיךָ יְשׁוּעָה / 'your chariots of salvation.' This is a case that comes under the permissible variations of the principle of nonintervention previously mentioned. In this case the pronoun cannot be attached to "salvation" without creating ambiguity.

Intervening sign of the direct object. Freedman listed Hab 3:13b as an example of the sign of the direct object breaking a construct chain. In the phrase לְיִשְׁעֵךָ אֶת מְשִׁיחֶךָ / 'for salvation with Your

73. Freedman, "The Broken Construct Chain," 534–36.

Anointed,’ Freedman proposed that the construct chain is... *יִשַׁע מִשִׁיחָךְ*. ‘the salvation of...your anointed’ in parallel with the preceding line “for the salvation of your people.” The *תָּא* would then break the construct chain. However the form of the word *יִשַׁע* is ambiguous, either absolute or construct, and the word *תָּא* may be either the sign of the direct object or the preposition “with.” The translation, following a more conventional grammar, would be “for salvation with Thy Anointed” (NKJV). The absolute noun governing a prepositional phrase makes sense. Though the line lacks poetic parallelism, such progressive structure is not uncommon. Freedman’s ambiguous speculation does not convincingly demonstrate that the sign of the direct object really breaks a construct chain in Biblical Hebrew.

Intervening adverb. Freedman listed Hab 3:13c as an example of an adverb breaking a construct chain. In the clause *רָשַׁע מִבַּיִת רֵאשׁ מְחַצֵּת* / ‘You struck the head from the house of the wicked,’ Freedman proposed that the construct chain is *רֵאשׁ ... מְחַצֵּת* / ‘the head of the...wicked one’ and that the word *מִבַּיִת* should be emended to *מִבְּיַת* (inward), so that the clause is translated “You crushed the head of the wicked one inwards.” But *רֵאשׁ* is an ambiguous form, either absolute or construct, and the revocalization is speculation based on poetic parallelism. The Masoretic pointing of the text makes sense. This revocalization does not convincingly demonstrate that an adverbial phrase really breaks construct chains in Biblical Hebrew.

He also listed Ezek 39:11 as an example of an intervening adverb. The text reads *מְקוֹם קְבָרֵי בְּיִשְׂרָאֵל* / ‘a place there of graves in Israel.’ He proposed that the construct chain is *מְקוֹם ... קְבָרֵי* / ‘a place of...burial’ with the adverb *שָׁם* (‘there’) intervening. The translation would be “a place of burial there in Israel.” However, *קְבָרֵי* has the concrete meaning “grave, sepulchre, burial place”⁷⁴ rather than the abstract sense of “burial” which is rendered by the Hebrew *קְבוּרָה*. Regarding *קְבָרֵי* as a genitive results in an awkward, unnatural sense (“a place of a grave there”). The last two words, *בְּיִשְׂרָאֵל*, function more naturally as an appositive (“a place there, a burial place in Israel”). The construct form *מְקוֹם* is explained by the phonetics created by the close rhythmical relationship between it and the following adverb *שָׁם*. Nevertheless, the example remains a possible broken construct chain; but, because it makes sense in the more conventional view (i.e., as an appositive), it remains ambiguous and does not provide a precedent for demonstrating that an adverb really breaks a construct chain in Biblical Hebrew.

74. BDB, 868.

Intervening verb. Freedman listed Hos 14:3 as an example of a verb breaking a construct chain. This example was previously noted by Gesenius,⁷⁵ and was discussed in a previous section.

He also listed Hos 6:9 as an example which reads *דָּרַךְ וַרְצָחוּ שְׁכֶמָה* / ‘they murder on the way to Shechem’. He proposed that the construct chain is *שְׁכֶמָה ... דָּרַךְ*, and that the verb intervenes. There are two reasons why this is ambiguous: (1) the form of *דָּרַךְ* is ambiguous, being either absolute or construct; and (2) the word *שְׁכֶמָה* has the locative *he* and is the equivalent of *לְשֶׁכֶם*. Thus the translation is “the way to Shechem,” and is not to be confused with “the way of Shechem.” Because the example is ambiguous, it does not provide clear precedent.

He also listed Hos 8:2 as an example which reads *לֹת יִזְעֻקוּ אֱלֹהֵי יִדְעֻנוּכֶל יִשְׂרָאֵל* / ‘Israel will cry to Me, “My God, we know You.”’ He proposed that the word *אֱלֹהֵי* be revocalized to *יִלְהֵי* to produce the broken chain ‘the God of...Israel’ with the verb intervening. The translation would be “O God of Israel, we know you.” This again involves revocalization of the Masoretic text. Freedman seems to exaggerate the change in number (from “my” to “we”), a common phenomenon in poetry. This instance does not provide strong evidence for demonstrating that a verb really breaks a construct chain in biblical Hebrew.

In summary, Freedman did not list one example of an unambiguous broken construct chain; all his examples involved unnecessary revocalization, ambiguous forms, or construct forms originating because of phonetics and rhythm rather than from a strictly grammatical genitive relationship. None involved an intervening adjective, nor do any qualify as a precedent for regarding *רֵאשׁ* as an adjective in Ezek 38:2, 3 and 39:1. Furthermore, Freedman did not list these passages in Ezekiel as examples of broken construct chains.

No Proof Found for Broken Construct Chains

None of the examples furnished by Gesenius, Dahood, or Freedman are unambiguous broken construct chains; all the examples involve unnecessary revocalization, ambiguous forms, or construct forms originating because of phonetics and rhythm rather than from a grammatical genitive relationship. All the possible cases of intervening attributive adjectives are problematical. Not one example qualifies as an unambiguous precedent for regarding *רֵאשׁ* as an adjective in Ezek 38:2, 3; 39:1. Furthermore, none of the three scholars listed

75. GKC, 128c.

these Ezekiel passages as examples of a broken construct chain. Consequently, it must be concluded that the existence of broken construct chains is speculative apart from the previously mentioned normal modifications of the principle of nonintervention. Alleged broken construct chains provide no support for breaking the principle of nonintervention in Ezekiel.

Historical Argument

The origin of the translation “chief prince of Meshech and Tubal” is traced to the Latin Vulgate. The early translators of the English Bible were quite dependent on the Latin Version for help in translating difficult passages. They evidently followed Jerome in Ezek 38:2, 3; 39:1.

Some have supposed that the Aramaic Targum may have been the source for interpreting ראש as an adjective. The Targum reads רב ריש מִשְׁךְ וְתֻבַל, where רב is the equivalent of Hebrew ראש and ריש (= ראש) is the equivalent of Hebrew ראש. But Aramaic has the same syntactic conventions for construct chains as Hebrew, so the same arguments that favor ראש as a name in Hebrew favor ראש as a name in Aramaic. Therefore, the Aramaic does not support regarding ראש as an adjective, although those who do not take into account the difference in pronunciation may erroneously think so (as Aquila and Jerome may have thought).

Evidently by the second century A.D. the knowledge of the ancient land of Rosh had diminished. And because the Hebrew word ראש was in such common use as “head” or “chief,” Aquila was influenced to interpret ראש as an adjective, contrary to the LXX and normal grammatical conventions. Jerome followed the precedent set by Aquila, and so diminished the knowledge of ancient Rosh even further by removing the name from the Latin Bible.

By the sixteenth century A.D. ancient Rosh was completely unknown in the West, so the early English translators of the Bible were influenced by the Latin Vulgate to violate normal Hebrew grammar in their translation of Ezekiel 38–39. Once the precedent was set in English, it was perpetuated in all subsequent English Versions until this century when some modern versions have taken exception. This ancient erroneous precedent should not be perpetuated.

Conclusion

It has been demonstrated that Rosh was a well-known place in antiquity as evidenced by numerous and varied references in the ancient literature. It has also been demonstrated that an adjective intervening between a construct noun and its *nomen rectum* is highly

improbable, there being no unambiguous example of such in the Hebrew Bible. Furthermore, it has been demonstrated that regarding ראש as a name is in harmony with normal Hebrew grammar and syntax. It is concluded that ראש cannot be an adjective in Ezekiel 38–39, but must be a name. Therefore, the only appropriate translation of the phrase in Ezek 38:2, 3, and 39:1 is “prince of Rosh, Meshech, and Tubal.”
